When the Standby mode is set to Eco, network functions such as power on over the LAN network will not operate. Also, only certain commands can be received for external control using the serial terminal.
Weasurement, measuring conditions and method of notation all comply with ISO/IEC 21118:2020 international standards.
Usage environment affects the duration of filter.
With legs at shortest position.
Average value. May differ depending on models.
When the projector is operated at an elevation of 1,400 m (4,593 ft) or less, if the ambient temperature exceeds 35 °C (95 °F), [Lamp Control] will be switched to [Eco] automatically to protect the projector. When the projector is operated at an elevation of not more the projector.
Operation range differs depending on environments.
When using Presenter Light Software, images are projected with 1280 x 800 dots or 1024 x 768 dots onto the screen. Also, your PC display resolution may be forcibly changed, and audio playback disrupted or become noisy, while images and sound are being transmitted.

while images and sound are being transmitted. \*9 When using the Wireless Projector app, display resolution differs depending on your iOS/Android device and the display device . The maximum supported display resolution is WXGA (1280 x 800).

# Projection distance formulas

For a screen size different from the above, use the equation below to calculate the projection distance.

#### Aspect ratio 4:3

minimum	L (m) = (diagonal screen size in inches) x $0.0304 - 0.0250$
maximum	L (m) = (diagonal screen size in inches) x 0.0365 - 0.0250
Aspect ratio 16:9	
minimum	L (m) = (diagonal screen size in inches) x 0.0331 - 0.0250
maximum	L (m) = (diagonal screen size in inches) x 0.0398 - 0.0250
Aspect ratio 16:10	
minimum	L (m) = (diagonal screen size in inches) x 0.0322 - 0.0250
maximum	L (m) = (diagonal screen size in inches) x 0.0387 - 0.0250

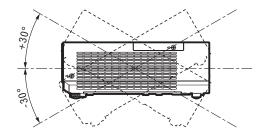

\* Distances calculated with the above equations will include a slight error.

\*1 Where marked " 
" signals indicates in Plug and Play is compatible with EDID of projector. Unmarked signals in Plug and Play may also be compliant if input terminals are written in the format list. Where Plug and Play is unmarked and nothing is written in the format list, difficulties in projecting image may occur even when computer and projector appear to have same resolution.

\*2 Pixel-Repetition signal (dot clock frequency 27.0 MHz) only.

\*3 When a 1125 (1035)/60i signal was input, it is displayed as a 1125 (1080)/60i signal.

\*4 VESA CVT-RB (Reduced Blanking)-compliant.

\*5 The signal with 1/1.001x vertical scanning frequency is also supported.

Note

• The number of display dots is 1024 x 768.

• A signal with a different resolution will be projected after converting the resolution to match the projector display.

• "i" added to the resolution value indicates an interlaced signal.

• When interlaced signals are connected, flicker may occur on the projected image.

• The image may not be displayed in full screen according to the computer output setting.
